SWITCH TO EVERYTHING

sentido

# Whatever your mood... switch it on

basalte switches are innovative and highly developed. Using touch-sensitive technology, basalte offers the most sober and user friendly interface you can imagine: one touch controls it all.

The basalte switches provide home control experiences that are a pleasure to use and never as easy to turn on or off.

You will recognize the basalte collection by it's blend of minimalist design, exclusive materials and timeless sophistication.

sentido 4 satin white

A woman with long brown hair, wearing a green sleeveless dress and a gold necklace, stands in a dark room. She is leaning against a vertical silver bar and has her hand on a minimalist black light switch. A thin red light strip is visible on the switch. The background is dark and textured.

“Simplicity is the ultimate sophistication.”

Leonardo Da Vinci

# sentido

The Sentido switch series stands for simplicity, comfort and quality.

Its design is pure and timeless thanks to touch technology and high-quality materials.

The entire surface area is high-quality, touch-sensitive brushed aluminium, allowing lighting, scenes or curtains to be operated at the slightest touch.

The Sentido light switch is available in two types: one with two functions and one with four functions.

Sentido uses patented multi-touch technology to detect a multiple keypress. By touching more than one area simultaneously, an extra comfort function is activated. This function can be used to switch all the lights in the room on or off in a single movement.

Sentido senses not only your touch, it has a built-in temperature sensor. This way room temperature information is available on the home automation system.

Besides sensing, Sentido has an integrated colour led. At dark it can be programmed to light up blue so you can easily find it. It can also light up in any other colour to display feedback information.

Sentido has an integrated bus-coupler to connect to the worldwide KNX standard. Programmation can be done with the ETS software.

# sentido KNX

Electronics	Sentido switch KNX — order number: 200-02
Functions	2-way and 4-way version with patented multitouch function Switch, dim , shutter or scène object for each single function
LED Feedback	Single function has a white feedback Multitouch function has an orange feedback RGB led can be freely programmed blue nightlight can be enabled or disabled, or controlled by a group address
Temperature sensor	Digital temperature sensor, reports a 2 byte groupaddress
Interface	KNX/EIB integrated BCU Programmable with ETS3
Power supply	Powered by the KNX/EIB bus
Power consumption	10 mA from the bus
Dimension	Cover plate: 80 x 80 x 8mm Module: 70 x 70 x 25mm
Backbox	Standard European backbox Round or square With screws, screwdistance 60mm Depth min. 50mm
Certification	CE approved
